

CASE STUDY

Romeland Conservation Area

Sector: Residential
Services: CCTV
Heritage Area, St Albans

ROMELAND

Case Study Number: 2

Requirement

This sensitive location required a particularly careful installation.

Project Information

The owners of these linked historic buildings in St Albans wished to install secure CCTV systems to protect and enhance their property. The problem was that it was located in a heritage area and any solution had to be in keeping with the design standards of the neighbourhood.

The Anchor Solution

The Anchor team proposed a simple but effective bespoke solution, including an ornate mount for a CCTV camera, in keeping with original lamp ironwork.

The building owner loved the aesthetic solution and also the security solution afforded by the installation.

They said, 'we loved the response and creativity to solve a design problem while also appreciating the secure aspects that the install gave us'.
